## Professional Summary

Fresh Graduate (CGPA 8.5, RGUKT Srikakulam) specializing in backend engineering with the MERN stack. Built and deployed 3 full-stack applications featuring JWT auth, Redis caching, atomic transactions, and real-time Socket.IO updates. Interned at Infotact Solutions building marketplace auth infrastructure. Solved 300+ DSA problems. Seeking SDE-1 roles in backend or full-stack product engineering.

## Education

### Bachelor of Technology in Computer Science and Engineering

2022 – 2026

Rajiv Gandhi University of Knowledge and Technologies, Srikakulam

CGPA: 8.5/10

## Skills

- **Languages:** Java, JavaScript, Python, C
- **Web Technologies & Frameworks:** HTML5, CSS3, Tailwind CSS, ReactJS, Node.js, Express.js, Redux Toolkit
- **Databases:** MongoDB, MySQL, Redis
- **Deployment & DevOps:** Render, Vercel, Git, GitHub, Postman, CI basics
- **Core CS:** Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, REST API Design, JWT/OAuth Authentication

## Internship Experience

### Full-Stack Developer Intern - Infotact Solutions, Bangalore

May 2025 – Jul 2025

- Owned end-to-end development of the authentication and authorization module for a MERN-stack service marketplace, used by **30** internal test users across the internship cohort.
- Built JWT-based authentication and role-based access control (RBAC) for 3 user roles (customer, provider, admin), reducing unauthorized endpoint access incidents to zero in QA testing.
- Designed and built **12+** REST API endpoints powering the admin dashboard, covering user management, service listings, and booking oversight.
- Resolved **5** code-review-flagged issues (validation gaps, query inefficiencies) across **2** sprint cycles, improving code consistency ahead of merge.

## Projects

### LinkUs – Social Networking Platform

Jan 2025 – Mar 2025

MERN Stack, Google Gemini API, Cloudinary, Redux – Github

- Built a social networking platform with feed generation, profile management, and connections, supporting **300** seeded posts with cursor-based pagination to keep feed load times under **200ms**.
- Implemented JWT authentication with bcrypt password hashing, schema validation (Mongoose), and middleware-based rate limiting to block brute-force login attempts.
- Integrated Google Gemini API to auto-generate post captions/suggestions, cutting manual content-entry time for test users by **30%**

### PayFlow – Digital Wallet & Payment System

Jan 2026 – Feb 2026

MERN Stack, Redis, Socket.IO, Jest – Github — Live Demo

- Built a secure P2P digital wallet with atomic MongoDB transactions ensuring 100% rollback safety on failed transfers, JWT auth, bcrypt encryption, and 3-tier rate limiting.
- Integrated Redis caching with 60-second TTL invalidation to reduce repeated DB queries and Socket.IO for real-time wallet balance updates after every transfer.

### HomeEase – Home Service Booking Platform

Aug 2025 – Nov 2025

MERN Stack, Google OAuth, Cloudinary, Render – Github

- Built and deployed a full-stack booking platform on Render supporting 3 distinct roles (Users, Providers, Admins) with Google OAuth and secure session handling.
- Designed RBAC and admin dashboard for service management, booking monitoring, and review moderation, handling **30+** test bookings without data-integrity issues.
- Implemented Cloudinary-based image upload/storage reducing image-related load times.

## Achievements & Certifications

- Solved 300+ Data Structures & Algorithms problems on LeetCode and GFG
- Deep Learning (NPTEL, IIT Ropar) – neural networks, CNNs, and deep learning architectures
- Object-Oriented System Development using UML, Java, and Design Patterns (NPTEL)
- Cloud Computing (NPTEL)
